Regular VCL users: 1000s

03 **Internal (Teradata)**

Users: 1 DBA

Key Insights

Not all queries are same

- Analytical and tactical queries are different.
- Usage from primary cluster is different from consumption from dedicated compute cluster.

A ‘Bad’ query depends on context.
Context drives prioritization.

- Eg: A bank submitting quarter end report to federal bank needs more compute towards Finance department and Analytical queries.

High time-to-understand, which query delayed the action

- Time to scan through details is higher.
- Eg: Looking at SQL code or Explain takes 3 clicks.
